

SECURITY INFORMATION WITHOUT ROCKET-SCIENCE

DEADLOCKS FOR ADDITIONAL SECURITY

Deadlocks are usually fitted in addition to existing locks, for added security, (or on doors where a latch or handle action is not required – i.e. the door is either locked or open).

Deadlocks are the ideal second lock where the existing lock is a 2, 3 or 4 lever lock (keys for these lever locks are available over-the-counter!) and where it is desirable not to change the existing handles or appearance of the doors (i.e. an office suite or Body Corporate where all the existing handles match each other).

The strength of the deadlock lies in the fact that it is morticed “inside” the door and becomes part of the structure, offering greater resistance both to attack and to the weather. The cylinder operated double-throw deadlock has a deadbolt (the part that locks into the frame of the door) much longer and higher than the normal deadbolt found on most locks in commercial or residential premises. The CISA double-throw deadlock (illustrated at left) also has a steel insert in the deadbolt, for extra resistance to sawing.

One of the great features of a cylinder deadlock is the cylinder itself. Cylinders can be easily removed and changed whenever a key is lost or stolen, without removing the lock body from the door. If the lock body is correctly fitted, the cylinder can be changed using only the correct key and a screwdriver! The recommended cylinder for security is usually a double one (key operation from both sides) particularly where there is glass in, or around the door.

OPTIONS AVAILABLE:

- Nickel plated (silver) finish on forend, escutcheons & striker plate
- Brass finish on forend, escutcheons & striker plate
- Double cylinder (uses a key from both sides)
- Half- cylinder (uses a key from outside only)
- Thumbturn cylinder (thumbturn on the inside, key from outside)
- High Security **CISA C3000 T06** or **ASTRAL TEKNO S01** cylinders with registered keys, available in double, half, thumbturn, in nickel plated or brass finish, keyed alike or master keyed – they can made to client’s requirements.
